

## CLAIMS

What I claim as my invention is:

1. Comprising of the sheet of paper, approximately 11 inches x 17 inches (sizes may vary), with water-resistant coating with a top and bottom planar surface and a peripheral edge with four sides or more. The top planar surface is liquid resistant and the bottom planar surface has pressure sensitive adhesive absent of release paper for adhering said placemat 500 to an eating surface.
2. Placemat 500 in claim 1 is folded into eight equally divided panels.
3. Placemat 500 in claim 1 bottom planar surface is covered with adhesive on six of the eight panels, the outer two and the inner four.
4. Placemat 500 in claim 1 the adhesive is pressure sensitive, but releasable therefore eliminating the need of release paper.
5. Placemat 500 in claim 1 bottom planar surface has a water-resistant coating
6. Placemat 500 in claim 1 is uniquely folded so the top planar surface is not exposed to the elements and therefore remains sanitary.
7. Placemat 500 in claim 1 has two small tabs in order to separate the adhesive and open the placemat
